Microchip ITP with high sample load capacity and concentrating power proved to be excellent for the purification purposes and preconcentration of trace analytes. The solution flowed through the microchannels in a manner that it was spread over the whole area. Glass was an early replacement for silicon, being less expensive, transparent, negatively charged, and a good support for electroosmotic flow [ 50 ].

Manipulation of small volumes of fluids using channels with dimension of ten

Integration of the cleanup process: Write a customer review.

This operation was suitable for low-level gas measurements, as zero drift was continuously checked.

In this case, paper-based devices can be extremely useful. Goodnight Lab Chris Ferrie. The Secret of Scent Luca Turin.
