This chapter addresses the different aspects of high temperature coatings. A large number of industrial processes operate in very aggressive environments.

Coatings | Special Issue : High Temperature Coatings

High-temperature-resistant coatings are designed to withstand extreme temperatures while providing protection against corrosion.

High temperature-resistant coatings are used in a variety of industries and markets to prevent corrosion of steel subjected to extreme.

Introduction to High-Temperature Coatings. By Masoud Shourgeshty, Mahmood Aliofkhazraei and Mehrdad Mohammad Alipour. Submitted: November 9th.

High temperature silicone resin and paints resist up to °C.

Leave this field. Since high temperature steel is often insulated, corrosion under insulation or CUI is frequently a concern, as active corrosion cannot be seen with the unaided eye unless the insulation is first removed.

However, total cure is achieved only after exposure to temperatures in the 0F. In many instances, immersion test data is used as an indication of whether a coating can prevent CUI. Silicones are essentially transparent to ultraviolet radiation from sunlight.
